DESIGN DEVELOPMENT OF ECO- PRINTED DINING TEXTILES: FROM NATURE TO TABLE

Dissertation Submitted By
Aarohee Chandratre

Masters in Textile Design
Leonardo Da Vinci School of Design

Textile industry creates environmental pollution through synthetic dyes and chemical processing.

- Sustainable textile practices are becoming increasingly important.
- Eco-printing is a natural textile surface technique using botanical materials.
- Dining textiles contribute toward interior aesthetics and functionality.
- The study focuses on eco-printed dining textile development using cotton fabric.

INTRODUCTION

AIM

To design and develop eco-printed dining textiles using cotton fabric and natural botanical materials for contemporary interior applications.

OBJECTIVES

- To explore eco-printing as a natural textile surface technique.
- To study the suitability of cotton fabric for eco-printing applications.
- To experiment with guava leaves and onion peels for surface development.
- To develop coordinated dining textile products.
- To understand consumer response through questionnaire analysis.
- To explore eco-printing within sustainable textile practices.

RESEARCH PROBLEM

- Conventional textile processes create pollution and excessive chemical waste.
- Sustainable alternatives are increasingly required in textile design.
- Limited research is available on eco-printed dining textiles.
- Eco-printing offers handcrafted and environmentally responsible surface development.

Product Development

Questionnaire Survey

Data Analysis

Conclusion

MATERIALS USED

Cotton Fabric

Guava Leaves

Onion Peels

Alum

Thread & Rubber Bands

ECO-PRINTING PROCESS

1. Scouring
2. Mordanting
3. Botanical Placement
4. Fabric Rolling
5. Steaming
6. Drying
7. Final Surface Development

DESIGN DEVELOPMENT

Inspiration

Nature, textures and organic forms

Material

Process Overview

- Botanical Selection
- Eco-printing Process
- Sample Development
- Design Development
- Product Development

Vision

To create sustainable, nature-inspired dining textiles using eco-printing techniques that bring the beauty of natural elements to everyday living.

Core Idea

1. Use of natural botanical materials
2. Eco-printing as a sustainable technique
3. Handcrafted textures and unique prints
4. Functional and aesthetic dining textiles
5. Harmony between nature and modern life

Design Direction

1. Botanical Imprints
2. Earthy Tones
3. Natural Textures
4. Modern Functionality

Values

Sustainability, Handcrafted, Mindful Living, Timeless Design

Outcome

MIND Map

FROM NATURE TO TABLE

Minimal

Earthy

Organic

Refined

Developed Products:

- Table Runner
- Placemats
- Napkins
- Tea Coasters

PRODUCT DEVELOPMENT

FINAL COLLECTION

Coordinated Eco-printed Dining Textile Collection

QUESTIONNAIRE SURVEY

Survey conducted through Google Forms

- Total Respondents: 100
- Responses collected from design and non-design backgrounds

MAJOR FINDINGS

- Cotton fabric showed excellent suitability for eco-printing.
- Guava leaves and onion peels created organic textures and earthy tones.
- Respondents preferred handcrafted and botanical surfaces.
- Table runners and placemats received higher preference.
- Eco-printing showed strong potential within sustainable dining textiles.

FUTURE SCOPE

- Hospitality and café textiles
- Customized dining collections
- Sustainable interior products
- Eco-conscious textile startups
- Expanded botanical experimentation

CONCLUSION

Eco-printing successfully supported sustainable textile development.

- Cotton fabric effectively absorbed botanical pigments.
- Eco-printing created organically expressive textile surfaces.
- Consumer response toward eco-printed dining textiles was positive.
- The study demonstrated the relevance of eco-printing within contemporary interior applications.
